# OpenType Layout Features

For details about OpenType Layout Features see the [OpenType Layout tag registry](#).

## Substitution Features

2<sub>2</sub>2<sup>2</sup>

**Access All Alternates**  
This feature makes all variations of a selected character accessible.

fi

**Standard Ligatures**  
Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers the ligatures which the designer/manufacturer judges should be used in normal conditions.

619

**Oldstyle Figures**  
This feature changes selected figures from the default lining style to oldstyle form.

123

**Tabular Figures**  
Replaces figure glyphs set on proportional widths with corresponding glyphs set on uniform (tabular) widths.

0

**Slashed Zero**  
Some fonts contain both a default form of zero, and an alternative form which uses a diagonal slash through the counter. This feature allows the user to change from the default 0 to a slashed form.

7/

**Numerators**  
Replaces selected figures which precede a slash with numerator figures, and replaces the typographic slash with the fraction slash.

/8

**Denominators**  
Replaces selected figures which follow a slash with denominator figures.

7/8

**Fractions**  
Replaces figures separated by a slash with 'common' (diagonal) fractions.

x<sup>2</sup>

**Superscript**  
Replaces lining or oldstyle figures with superior figures (primarily for footnote indication), and may replace lowercase letters with superior letters (primarily for abbreviated French titles).

x<sub>2</sub>

**Subscript**  
The "subs" feature may replace a default glyph with a subscript glyph.

H<sub>2</sub>

**Scientific Inferiors**  
Replaces lining or oldstyle figures with inferior figures (smaller glyphs which sit lower than the standard baseline, primarily for chemical or mathematical notation). May also replace lowercase characters with alphabetic inferiors.

1<sup>st</sup>

**Ordinals**  
Replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.

s.ſ

**Historical Forms**  
Some letterforms were in common use in the past, but appear anachronistic today. The best-known example is the long form of s; others would include the old Fraktur k. Some fonts include the historical forms as alternates, so they can be used for a 'period' effect.

(G}

**Case-Sensitive Forms**  
Shifts various punctuation marks up to a position that works better with all-capital sequences or sets of lining figures; also changes oldstyle figures to lining figures.

ſſ

**Localized Forms**  
This feature enables localized forms of glyphs to be substituted for default forms.

GG

**Stylistic Alternates**  
Many fonts contain alternate glyph designs for a purely esthetic effect; these don't always fit into a clear category like swash or historical. This feature replaces the default forms with the stylistic alternates.

  
[1]

Stylistic Set 1  
Glyphs in stylistic sets may be designed to harmonise visually, interact in particular ways, or otherwise work together.

[2]

Stylistic Set 2

[3]

Stylistic Set 3

[4]

Stylistic Set 4

r̄·r̄

Glyph Composition / Decomposition  
To minimize the number of glyph alternates, it is sometimes desired to decompose a character into two glyphs. Additionally, it may be preferable to compose two characters into a single glyph for better glyph processing. This feature permits such composition/decomposition.

## Positioning Features

N≡E

Capital Spacing  
Globally adjusts inter-glyph spacing for all-capital text. Most typefaces contain capitals and lowercase characters, and the capitals are positioned to work with the lowercase. When capitals are used for words, they need more space between them for legibility and esthetics.

T≡o

Kerning  
Adjusts amount of space between glyphs, generally to provide optically consistent spacing between glyphs.

## Languages

Information about languages is mainly based on the Unicode Common Locale Data Repository. For details visit the [Unicode CLDR Project](#).
